## 1.Opis funkcionalnosti

Sajt služi za online rezervaciju stolova za izabrani datum i termin. Postoje 3 uloge, korisnik, zaposleni i administrator.

Korisnik se prilikom logovanja na sajt redirektuje na stranicu gde može da rezerviše sto tako što će izabrati datum, vreme kada želi da rezervacija počne, i na osnovu izabranog vremena početka se AJAX-om prikazuju termini do kada rezervacija može da traje. Kada korisnik sve to izabere AJAX-om se prikazuju svi stolovi, koji nisu zauzeti tog datuma i u tom vremenskom periodu koji je korisnik izabrao. Ukoliko korisnik ne želi nijedan od slobodnih stolova, u svakom trenutku može promeniti datum ili bilo koji od termina i tada se menja i lista slobodnih stolova. Ukoliko korisnik izabere datum koji je manji od trenutnog datuma, javascript alert dijalogom se obaveštava korisnik da mora promeniti datum. Korisnik ima pregled svih svojih rezervacija, gde mu se ispisuje da li je rezervacija realizovana ili nije (smatra se da rezervacija nije realizovana ako korisnik nije došao, a nije otkazao rezervaciju, što zaposleni mora da potvrdi), i takodje može otkazati rezervaciju ako je datum otkazivanja manji od datuma rezervacije, kao i na sam dan rezervacije sve do 1h pre njenog početka. Prilikom otkazivanja rezervacija se briše iz baze.

Zaposleni se prilikom logovanja na sajt redirektuje na stranicu gde ima pregled rezervacija za današnji dan, svih aktivnih rezervacija za bilo koji od zakazanih termina, kao i svih rezervacija koje su završene. Zaposleni takodje može vršiti otkazivanje svih aktivnih rezervacija na isti način kao i korisnik. Kod rezervacija za današnji dan, zaposleni mora da potvrdi rezervaciju ako je korisnik došao i tada se i korisniku i zaposlenom menja status te rezervacije i ispisuje se da je realizovana. Zaposleni dobija opciju za potvrđivanje rezervacije tek kada ona počne i ukoliko je ne potvrdi u toku tog dana, smatra se da korisnik nije došao i da rezervacija nije realizovana. U delu završene rezervacije zaposleni može videti sve rezervacije koje su prošle i njihove statuse, da li su realizovane ili ne.

Administrator se prilikom logovanja na sajt redirektuje na stranicu za administraciju, i tu može da dodaje, briše, i menja korisnike, jelovnik, stolove, da vrši pregled svih aktivnosti administratora na sajtu, da dodaje slike u galeriju slika, pri čemu se slika koja je dodata smanjuje i mala slika prikazuje u galeriji. Administrator može menjati ankete, dodavati nova pitanja ili brisati stara, kao i izabrati koja će anketa biti prikazana, pri čemu samo jedna anketa može biti aktivna.

Logovanje, odjava i zaštita sesijama.

Dinamički meniji iz baze u header-u i footer-u.

Kontakt forma sa proverom regularnim izrazima.

Straničenje na stranicama galerija, i kod pregleda rezervacija u delu za zaposlenog, u admin panelu kod prikaza liste korisnika, stolova, jelovnika, anketa, logova.

U footeru svake strane postoji anketa koja je rađena preko AJAX-a.

Na stranici kontakt polje za poruku broji unete karaktere, i ispisuje ispod polja, ukoliko je broj karaktera ispod 3 ili preko 300 ispisuje crvenom bojom. Radjeno preko javascripta.

Zbog povremenih problema sa free hostingom i slanjem maila za potvrdu registracije, registracija se radi bez toga.
